Secretary Gray Praises President Trump's Executive Order to End Subsidies of Wind and Solar

CHEYENNE, WY – In response to President Trump's Executive Order Ending Market Distorting Subsidies for Unreliable, Foreign Controlled Energy Sources on July 7th, Wyoming Secretary of State Chuck Gray made the following statement:

"I'm in complete and total support of President Trump's action to end federal subsidies on unreliable renewables, like wind and solar. President Trump's Executive Order is so important for the future of our state and country. For far too long, the radical Left has pushed policies to subsidize the unreliable renewable energy industry at the direct expense of Wyoming's beautiful coal, oil, and gas industries. In reality, this system has been nothing more than a system for picking winners and losers, all at the expense of American taxpayers. This is one of the many reasons why I was the lone no vote on the State Board of Land Commissioners where I opposed a state lease for the foreign-backed wind project in Niobrara and Converse Counties in April. We cannot keep propping up these fantastical, boondoggle green new deal energy scams. President Trump is doing great work stopping these federal subsidies and in the process is continuing to do a wonderful job championing our core fossil fuel industries."
